Longview Parks and Recreation Board
2920 Douglas St
Longview, WA 98632

Dear Board Members,

I am requesting permission to create and place an interpretive panel inside RA Long Park. The panel would be located near the Sun Dial and facing towards the Monticello Hotel. The sign can be moved, relocated, or repositioned if deemed necessary. The interpretive panel would outline an easy to follow, self-guided tour of RA Long Park and the Civic Circle showing twelve points of interest. The new panel would be made by Interpretive Graphics Signs and Systems, the same company that designed for the Shay Locomotive, and would be designed to match the style and stands of that design. The panel will be supplied at no cost to the city.

Attached is a copy of the recommended route. The panel will have small photographs of each of the twelve locations of interest, with brief historical information and dates associated with each site. Currently, there is no organization or information available to Park visitors; this panel will create more interest in and knowledge of our local history in both local visitors and tourists. I believe it will increase public use of the park.

Your consideration of my request will be greatly appreciated.

Thank you for your time,

Bill Kasch

Thank you for your interest in our organization and products. **Interpretive Graphics Signs & Systems** specializes in the development of interpretive, commemorative, and historical signage. We offer a complete range of planning, from broad-base communication planning to site-specific interpretive planning, writing, and text editing. We also offer a full range of illustration, design, production-related graphics, fabrication, and installation services. Beginning at any point you wish, we will complete your project efficiently and professionally.

Per your request, following are the specifications and cost for ImageLOC signs. ImageLOC is a new printing technology where the ink is fused and locked within the organic coatings. The image is enhanced by the process, creating vivid color and lifelike imagery. The surface of ImageLOC is hydrophobic whereby graffiti simply sits on top of the coating and does not penetrate or damage it. With proper cleaners, graffiti wipes right off with no impact on the image. ImageLOC is warranted not to fade, crack, peel or delaminate for a minimum of 10 years.

- Fabrication and shipment of 24"hx34"wx1/8" thick, double-sided, ImageLOC panels, each with a double pedestal, in-ground, 45 degree, black texture powder coated aluminum set of posts with frame. Production-ready digital files to manufacturer specifications are to be provided to Interpretive Graphics. Prior to fabrication, 1-8"x10" color sample and PDF files will be provided for production approval. Estimated shipping is included to Longview, WA 98632 (no special services included).

- Option 1 - 1 sign and 1 base: \$1,082.00
- Option 2 - 2 signs and 2 bases: \$2,032.00

We look forward to working on this project with you. Please let me know if you have any questions or need additional information.
