

Proposal- Longview ADA Asset Collection

ADA Asset Collection Scope of Services

The City of Longview is required to develop an ADA Transition Plan to comply with Title II of the ADA regulation. IDAX Data Solutions will provide inventory of curb ramps and sidewalk located in the right-of-way within the City limits and street that currently have sidewalks. The consultant will conduct field survey of the curb ramp and sidewalk and provide the collected data in a GIS shape file.

Collection of the data will be on site using tablets to record data into ESRI Collector. The additional tools required are a digital level, tape measure, and the ADA Field Guide for reference (in both PDF on the tablet and a paper copy for field notes).

Deliverables will be shapefiles of each feature type collected (curb ramp and sidewalk) using the database fields agreed upon with the City. Attachments have been allowed to enable images of historic scoring and curb ramps for assessing more complex replacement needs.

The City of Longview has provided a shapefile of all City street centerlines with sidewalks. All data collected will be within the street segments identified as having existing sidewalks. The City has also outlined the fields needed to collect the data required to assess ADA compliance.

The project will be completed with all data delivered within 10 weeks of the start date, which will begin no less than two weeks after given notice to proceed.
